

eBuy

Web Based Procurement System

eEstablish transparent and efficient relationship with your supplier

Brief Coverage

eBuy is a software that allows an organization to carry out the procurement activity by leveraging the power and low cost of Internet. It covers the activities of Supplier selection, Negotiation, Order placement and Order tracking in the procurement cycle.

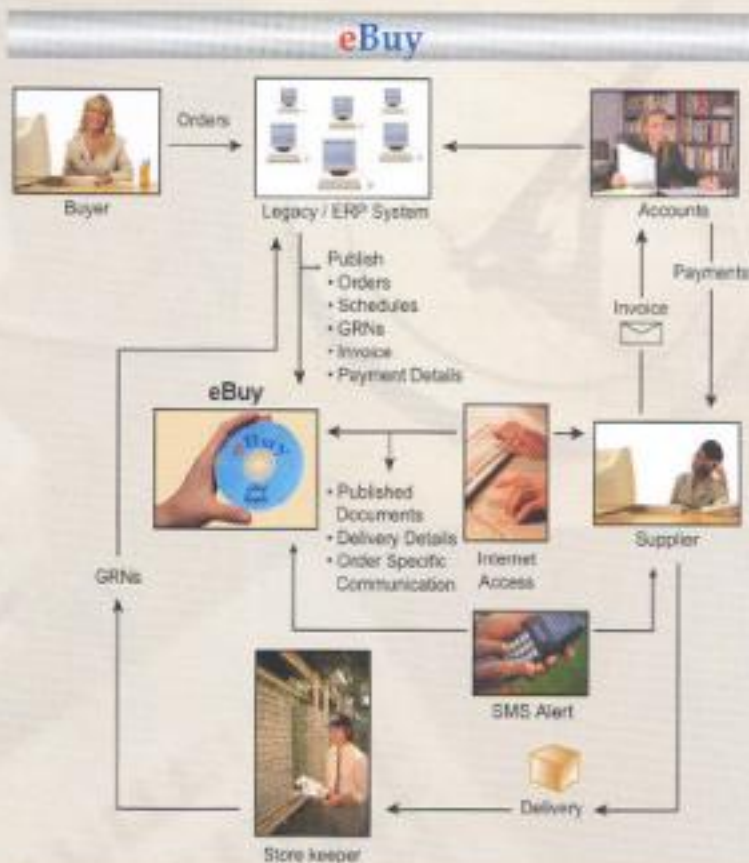

The identification and selection of supplier is handled through Reverse Auction (RA) and Request for Quotation (RFQ) modules.

These modules enable the buyers to create the market, invite suppliers for bids, monitor the market, get and analyze the result. The module also provides for extracting data to MS-Excel for further analysis.

eBuy allows tracking of Purchase orders for delivery schedules, receipts, invoices, payments etc. Any changes can be electronically communicated to suppliers. Supplier can view only the information that is relevant to him.

The organization can also publish information of interest to the general supplier community on an electronic notice board. The supplier on his part can communicate dispatch details to the organization. The organization and supplier can exchange order specific information in the system. The system keeps record of all these exchanges.

Ability of eBuy to put information in self-help mode for the supplier can free up a lot of time for the Purchase function which can be used in more value-added activities.

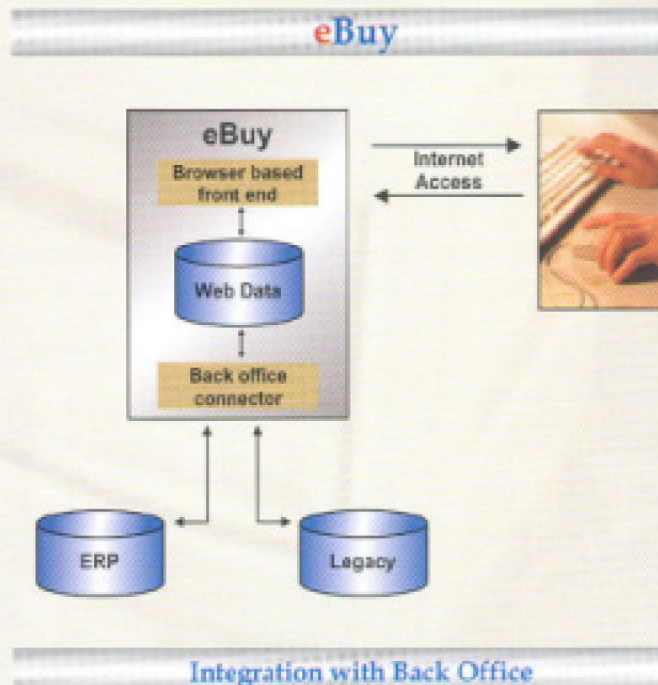

Integration

The Enterprise data resides in backend Enterprise Resource Planning (ERP) or Legacy system. To successfully extend business onto the Web, the organization needs to share the enterprise data with their business partners.

eBuy provides a mechanism to seamlessly integrate backend ERP or Legacy system with front end Web system to enable secure exchange of information between the organization and its partners.

Information about Orders, Goods-Receipt-Notes, Invoices etc. is exchanged seamlessly between the Enterprise system and eBuy through adaptors and connectors.

Benefits

Best Purchase Price in shorter lead time.

The reverse auction leads to increased competition among suppliers, thus resulting in lower prices and reduction in lead time.

Automation in Procurement

Both direct and indirect purchases are automated by transferring data to ERP/ Legacy system.

Preferred Supplier base

Develop Data bank of those suppliers who give you better quality products at most economical rates.

Efficient Purchase Order Process.

Reduces the total Purchase Cycle time through electronic communication

Reduce Purchasing Cost

Electronic viewing of schedules results in instantaneous and accurate communication, thereby reducing cost of documentation.

Immediate ROI

Drastic reduction in operation cost gives you immediate ROI in months not years adding to bottomline and growth.

SMS Alert messages

Key users can get SMS messages on their mobiles anywhere from eBuy for various alerts set in the software. Be in touch wherever you are.
